## BARs OF GOLD

New York, March 8.—A crowd of several hundred persons saw \$1,800,000 in gold bars transferred from the assay office in Wall Street to the United States Subtreasury. The metal was not incased in kegs or sacks, as is usually done, but was bare of any covering—136,000 bars shining in the sunlight.

The assay office is being repaired and George A. Terry, assistant United States treasurer, believed the gold would be safer in the vaults of the subtreasury. A special detail of uniformed and plain clothes policemen was on guard. The transfer was made under the direction of "Honest John" the truckman, who handles most of the gold for Wall Street and the banks.

## REPUBLICANISM FAILING

In referring to the Sixth Missouri district, Leslie's Weekly, a republican organ of New York, says:

"The meaning of the tremendous democratic majority in Missouri—the largest ever given to a candidate for Congress in that district—is plain. ## ORIGINAL FORBIDDEN FRUIT

Banana, the Curiosity of the Vegetable Kingdom, Is So Considered by Many.

The banana, which the late Sir Alfred Jones did so much to popularize in England, is believed by some people to be the original forbidden fruit of the Garden of Eden. In any case, it is one of the curiosities of the vegetable kingdom, being not a tree, a palm, a bush, a shrub, a vegetable or an herb, but a herbaceous plant with the status of a tree. Although it sometimes attains a height of 30 feet, there is no woody fiber in any part of its structure, and the bunches growing, on the dwarf banana plant are often heavier than the stalk which supports them. No plant gives such a quantity of food to the acre as the banana; it yields 44 times more by weight than wheat. Moreover, no insect will attack it, and it is always immune from disease of any kind. Altogether, a highly favored plant, and likely to become even more popular in this country than it is at the present time.

## AN INSULT.

## NEW EARTHQUAKE THEORY.

Areas of earthquake and volcanic activity are traveling westward about twenty-five miles a year, according to the investigation of H. Wehner, a German physicist. He accounts for this by the novel theory that the earth's solid crust incloses a thin layer of liquid, within which is a solid nucleus rotating about the same axis as the outer shell, and in the same direction, but with a slightly less velocity, the lagging behind causing the nucleus to make a revolution to the west in the crust in about 952 years. It is assumed that earthquake and volcanic disturbances result when projecting or active spots on the nucleus are moved under weak portions of the crust. From reports by ships during the last 60 years it is calculated that the active spots of the Atlantic are nearly all collected at the present time under the region between 35 and 41 degrees west longitude and one degree north and one degree south latitude, and that this area off the northeastern coast of South America may be regarded as a danger zone.

## GRECIAN NOSE WORTH £1,000.

Mlle. Boucheraud, a fascinating Parisian actress, once had a perfect Grecian nose. Now it is slightly concave in its lower part, and she is claiming in the law courts £1,000 from M. Lang, who was the direct cause of the alteration. M. Lang considered that Mlle. Boucheraud did not reserve her fascination for himself, and in the course of a lovers' quarrel struck her heavily on the face.
